

Site Solutions

Contaminated Soil
Solutions available
nationwide

Economic & environmental end to end service.

How we work

Call or email the
team to discuss
your requirements.

We have an
extensive network
allowing us to find
the most efficient
solution.

The team have
the expertise to
advise on the
best solution.

We will arrange
removal and
recycle where
appropriate.

What we need to know

Where the site is

What quantity of contaminated material requires disposal

What testing has been done on the soil already

If you suspect that there was any background contamination before the current event

We have developed expertise in the removal and treatment of contaminated soil. We have a national database of treatment sites, skip and haulage contractors and understand the legislation and compliance requirements.

End to end service

- We source the most economic disposal method, be that treatment, landfill or a combination of the two.
 - We organise the haulage and treatment and make sure the correct paperwork is completed.
 - If testing is required, we will arrange analysis of the soil and advise whether the results indicate it hazardous or non-hazardous.
 - Where it makes most sense to do so, our national network of treatment sites ensure that the contaminated soil is recycled for reuse rather than taking up valuable landfill space.
